

Retractable Screen Measuring Instructions

STEP 1

Select the continuous flat surface (door jamb) around the entire door frame. The surface must have at least 1" of clearance for the frame housing components to be installed on the hinged side of the door. All other sides of the door frame require at least 15/16" clearance for a trouble-free installation of your Casper Disappearing retractable door screen.

STEP 2

Next, measure both the height and width of door frame's mounting surface to the nearest 1/16".

STEP 3

The height should be measured on the "hinged" side of the door frame.

Door Frame Height: (1) _____ (2) _____

STEP 4

The width should be measured twice; once at the top of the door frame and once at the bottom of the door frame.

Door Frame Width (top): (1) _____ (2) _____

Door Frame Width (bottom): (1) _____ (2) _____

STEP 5

Repeat steps 3 & 4 to make sure the first measurement was correct.
